ABSTRACT

This system provides an easy solution for customers to buy product without going to the shop and also to shop owner to sale the electronics product in this site.

This proposed system can be used by any naive users and it does not require any educational level, experience or technical expertise in computer field but it will be of good use if user has the good knowledge of how to operate a computer.

This project is a web based shopping and booking system for an existing shop. The project objective is to deliver the online shopping application into android platform. This project is an attempt to provide the advantages of online shopping to customers of a real shop. It helps buying the electronic products in the shop anywhere through internet by using an android device. Thus the customer will get the service of online shopping and home delivery from his favorite shop. This system can be implemented to any shop in the locality or to multinational branded shops having retail outlet chains. If shops are providing an online portal where their customers can enjoy easy shopping from anywhere, the shops won't be losing any more customers to the trending online shops such as Amazon or ebady. Since the application is available in the Smartphone it is easily accessible and always available.

What is problem facing now a days with topic & technology:

Product Quality issue- The biggest problem while buying things online is that you have no guarantee of a products quality. Reviews are not always reliable and all the research cant assure you of a products quality; fraudulent seller who intentionally mislead customers to increase sales are the prime reason for faulty/subpar products being sold online.

Delivery And Logistics :- One predicament that constantly turns up while shopping online is when the order will be delivered. While boat-lifestyle.com site have order tracking systems for their customers, they aren't always accurate. Delivery personnel often turn up at our homes when we're at work or out somewhere as there's no way to fix a particular time slot for the delivery to take place. This same issue exists while returning products.

Digital Payment Failures;- Whether a customer is paying by credit/debit card, net banking, or one of the several digital wallets that exist today, the failure of digital payments always looms overhead while making online transactions. A faltering internet connection or a technical glitch often results in the payable amount being debited from a customer's account without being credited to the selling party. And retrieving this amount is anything but a quick process; one has to inform the site and then wait around 7-10 days before the amount is refunded to their bank accounts. But this situation is steadily improving as the sector is focusing more on cashless transactions and customers are getting more informed about making payments online.

What improvement you are thinking for my projects

Make your website mobile friendly- Nowadays, most people aren't viewing your website on a computer or laptop. They're much more likely to be perusing your goods on a phone or laptop. That's why it's crucial to have a mobile friendly version of your site. This makes it much easier to browse, and shows customers that you care about their experience with you.

Make your site easy to navigate:- Nothing's worse than a site where the customer can't see where to go. Map your site out so they can see exactly what you sell, and where they should go to get it. It saves them time and hassle when they come to buy.

Use good photos:- Show your customer what the product looks like from every angle. It helps them make the most informed choice before they hit 'add to cart' .Also, make sure the photos are of high a quality as possible. They need to be able to see everything there is to see. Allowing customers to add photos to reviews is another way to help them get a really good look, too.

INTRODUCTION

Online Electronics product Booking and gadgets Shopping System application enables vendors to set up online electronic gadget and shops, customer to browse through the electronics and gadget shop, and a system administrator to approve and reject requests for new electronic and shops and maintain lists of electronics and wearable shops. Also the developer is designing an online gadget booking and wearable shopping System site to manage the list of electronic items and also help customers to purchase and booking them online without visiting the electronic shop physically. The online electronic product booking sopping system will use the internet as the sole method for selling goods to its consumer.

History of Online shopping:-

The first secure retail transaction over the Web was either by Net Market or Internet Shopping Network in 1994. Immediately after, Amazon.com launched its online shopping site in 1995 and eBay was also introduced in 1995. Alibaba's sites Taobao and Tmall were launched in 2003 and 2008, respectively.

Online shopping started early in 1995 by the introduction of internet in India. Online shopping became popular during the Internet boom in 1999-2000 with the well know auction site know as bazee.com.

My project is similar to online shopping. Online Gadget Booking And Buying wearable item. Means my project's history will also be related in the Booking and shopping applications.

Concern technology in market:-

Wearable product just like online shopping is a form of electronic commerce which allows Consumers to directly buy goods or services from a seller over the Internet using a web browser or a mobile app. Consumers find a product of interest by visiting the website of the retailer directly or by searching among alternative vendors using a shopping and mechanics booking search engine, which mechanics booking availability and pricing different e-retailers. customers can shop online using a range of different computers displays the same product's pricing at different e-retailers.

Difference with previous technology used with new one you are using:

The earlier technology was very old means that the earlier technology was written only S which was not that good, reliable, flexible ,security And now the technology is very flexible, reliable and very strong security provided. And whatever technology I have done which is HTML, CSS, JavaScript and also using stripe database and payment gateway etc.

- **Enhanced User Experience**
  Previous Technology**:** Basic interfaces with limited interactivity.

  New Technology**:** Modern systems use AI and machine learning to provide personalized shopping experiences, recommending products based on user preferences and past behavior.

- **Sustainability and Smart Materials**
  Previous Technology: Conventional materials with limited focus on sustainability.

  New Technology: Increased use of sustainable and smart materials that are eco-friendly and offer additional functionalities, such as temperature regulation and biometric monitoring.

- **Real-Time Analytics**
  Previous Technology: Delayed data processing and analysis.

  New Technology: Real-time analytics enable immediate feedback and adjustments, improving inventory management and customer satisfaction.

Application Area:

www.boat-lifestyle.com

PROJECT PLAN MODULE

The system after careful analysis has been identified to be presented with the following modules and roles. The modules involved

1.Admin

2.Customer

3.Machanism

PROJECT MODULE DEFINITION

1.Admin:

The administrator is the super user of this application. Only admin have access into this admin page. Admin may be the owner of the shop. The administrator has all the information about all the users and about all products. This module is divided into different sub-modules.

1.1 Manage Products

1.2 Manage Users

1.3 Manage Orders

Manage Products

Add Products:-

The shopping cart project contains different kind of products. The products can be classified into different categories by name. Admin can add new products into the existing system with all its details including an image.

Delete Products :-

Administrator can delete the products based on the stock of that particular product.

Search products:- Admin will have a list view of all the existing products. He can also search for a particular product by name.

Manage Users

View Customers:-

The admin will have a list view of all the customers registered in the system. Admin can view all the details of each customer in the list except password.

Add Customer:-

Admin has privileges to add a user directly by providing the details.

Delete & Block Users :-

has a right to delete or block a customers. The default status of a new user registered is set as blocked. The admin must accept the new customer by

Manage Order/Booking

View Order :-

Administrator can view the Orders which is generated by the users. He can verify the details of the purchase.

Delete order:-

Admin can delete order from the orders list when the product is taken for delivery

USER(CUSTOMERS):

View Products

User can view the list of products based on their names after successful login. A detailed description of a particular product with product name, products details, product image, price can be viewed by users.

Search Product

Users can search for a particular product in the list by name.

Add to cart Product

The user can add the desired product into his cart by clicking add to cart option on the product. He can view his cart by clicking on by cart can be viewed in the cart. User can remove an item from the cart by clicking remove.

Checkout Cart

After confirming the items in the cart the user can submit the cart by providing a delivery address. On successful submitting the cart will become empty.

History

In the history the user will have a view of pending orders.

MACHANISM:

User Interface (UI/UX)

- Search and Navigation: Users can search for products using keywords, categories, and filters (price range, brand, etc.).
- Product Display: Products are shown with images, descriptions, prices, and customer reviews.
- Shopping Cart: Allows users to add items they intend to purchase, adjust quantities, and see the total cost before checkout.
- User Account System: Enables users to create profiles, save preferences, and track order history.

Product Catalog Management

- Inventory Database: Stores information about available products, including stock levels, prices, and descriptions.
- Search Engine Optimization (SEO): Ensures that product listings are easily found by search engines, improving visibility.
- Product Recommendations: Suggests additional products based on user preferences, browsing history, and past purchases using algorithms (collaborative filtering, content-based recommendations).

Order Management System (OMS)

- Order Processing: Once a user places an order, it triggers the order processing system, which verifies stock availability and reserves the item.
- Order Tracking: After the order is confirmed, users can track the shipment and delivery status.
- Shipping and Logistics: The system integrates with third-party shipping companies for delivery updates.

Payment Gateway

After the checkouts make your payments through UPI , net banking and cards with secure network.

- Payment Processing: Securely handles payments by connecting the shopping platform with financial institutions (banks, credit cards, payment services like PayPal or Stripe).
- Security (SSL, PCI Compliance): Encrypts sensitive data such as credit card information during transactions to prevent fraud and data breaches.

- Fraud Detection: Uses algorithms and machine learning to detect suspicious activity and reduce the risk of fraudulent transactions.

Customer Service Mechanism

- Help Desk: Provides assistance for user queries, issues with orders, or product returns. Automated chatbots or human customer service agents may be used.
- Returns and Refunds Management: Facilitates the process for users to return items and receive refunds.

Content Management System (CMS)

- Product Information Management (PIM): Ensures accurate, detailed, and up-to-date product listings.
- Blog/Content Updates: Allows the store to publish news, updates, or promotional content to engage customers.

SOFTWARE REQUIREMENT SPECIFICATION (SRS)

INTRODUCTION OF SRS

Scenario:

Software Requirement Specification (SRS) Format as name suggests, is complete specification and description of requirements of software that needs to be fulfilled for successful development of software system. These requirements can be functional as well as non-functional depending upon type of requirement. Nowadays many individuals are showing their interests to adopt various technical fields. They should identify their interests, to determine whether they are in the right path to reach their targets and to strengthen the weak areas to be successful. To know all these there should be a pre valuation of all the skills that an individual knows. This model is proposed the Online Booking and shopping System for electronics and wearable products booking web application is intended to provide complete solutions for vendors as well as customers through a single get way using the internet.

Purpose:

This document is meant to delineate the features of OWSS, so as to serve as a guide to the developers on one hand and a software validation document for the prospective client on the other.

The Online Wearable Shopping System (OWSS) for electronic and wearable product booking web application is intended to provide complete solutions for vendors as well as customers through a single get way using the internet. It will enable venders to setup online mechanism and shops, customer to browse through the shop and booking, purchase them online without having to visit the electronics shop physically. The administration module will enable a system administrator to approve and reject requests for new electronic shops and maintain various lists of electronic shop category.

Scope:

- This system allows the customer's to maintain their cart for add or remove the product over the internet
- This system allows the customer's to Physically maintain their current address for solving the problem over the internet
- This system allows the customer's to automatically maintain their current address for solving the problem over the internet
- This system allows the customer's to return the product when
  Product is not uses and recover the product price

Definitions:

OWSS – Online Wearable Product Booking System.

SRS - Software Requirement Specification

GUI - Graphical User Interface

Stack holder - The person who will participate in system

Ex. Customer, Administrator, Visitor etc.

Overview:

This system provides an easy solution for customers to booking and buy the electronic and wearable product without going to the shop and also to shop owner to sale the wearable product.

This proposed system can be used by any naïve users and it does not require any educational level, experience or technical expertise in computer field but it will be of good use if user has the good knowledge of how to operate a computer.

Overall Description:

Online Wearable Booking System(OWBS) application enables vendors to set up online electronics product shops, customer to browse through the electronic wearable shop, and a system administrator to approve and reject requests for new wearable shops and maintain lists of product items. Also the developer is designing an online order booking and wearable product shopping System site.

Product Functions:

OWSS should support this use case.

User Characteristics:

User should be familiar with the terms like login, register, booking mechanism, order system etc.

Principle Actors:

Principle Actors are Customer and Administrator.

General Constraints:

A full internet connection is required for Online shopping system(OSS).

Assumptions and Dependencies:

Working of OSS need Internet Connection.

Functional Requirements:

This section provides requirement overview of the system. Various functional modules that can be implemented by the system will be-

View Products

User can view the list of products based on their names after successful login. A detailed description of a particular product with product name, products details, product image, price can be viewed by users.

Search Product

Users can search for a particular product in the list by name.

Add to cart Product

The user can add the desired product into his cart by clicking add to cart option on the product. He can view his cart by clicking on by cart can be viewed in the cart. User can remove an item from the cart by clicking remove.

Changes to Cart

Changes to cart means the customer after login or registration can make booking, order or cancel order of the product from the shopping cart.

Payment

In this system we are dealing the mode of payment by Cash. We will extend this to credit card, debit card and UPI etc in the future.

Non-Functional Requirements:

Following Non-Functional Requirements will be there in the insurance to the internet:

- Secure access to consumer's confidential data.
- 24X7 availability.

- Security Reliability
- Maintainability
- Portability
- Extensibility
- Reusability Compatibility
- Resource Utilization

Interface Requirement:

Various interfaces for the product could be-

(1). Showing Page

(2). Scrolling Page

(3). There will be a screen displaying information about product, mechanic that the shop having.

(4). If the customers select the buy, book button then another screen of shopping, booking cart will be opened.

(5). After ordering for the product, the system will sent one copy of the bill to the customer's Email address

Software Interface

Operating System:

Windows 7, windows 8, windows 10, windows 11 Ultimate which supports networking.

Software development toolkit

Hardware Interface

Hardware requirements for insurance on internet will be same for both parties which are as follows:

- RAM: 2 GB
- Processor: Dual Core
- Software Interface:
- Hard Disk: 320 GB
- NIC: For each party

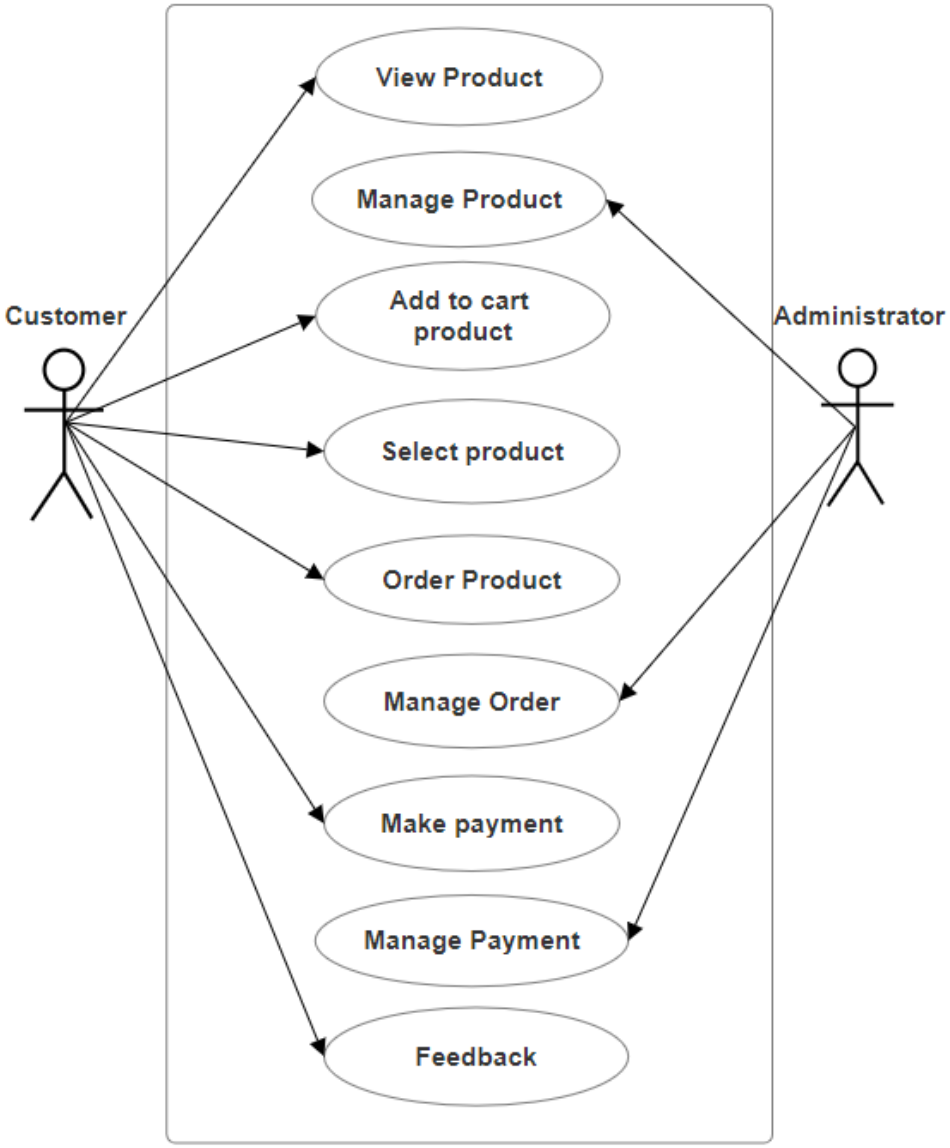
Communication Interfaces:

The two should be connected by LAN or WAN for the communication purpose.

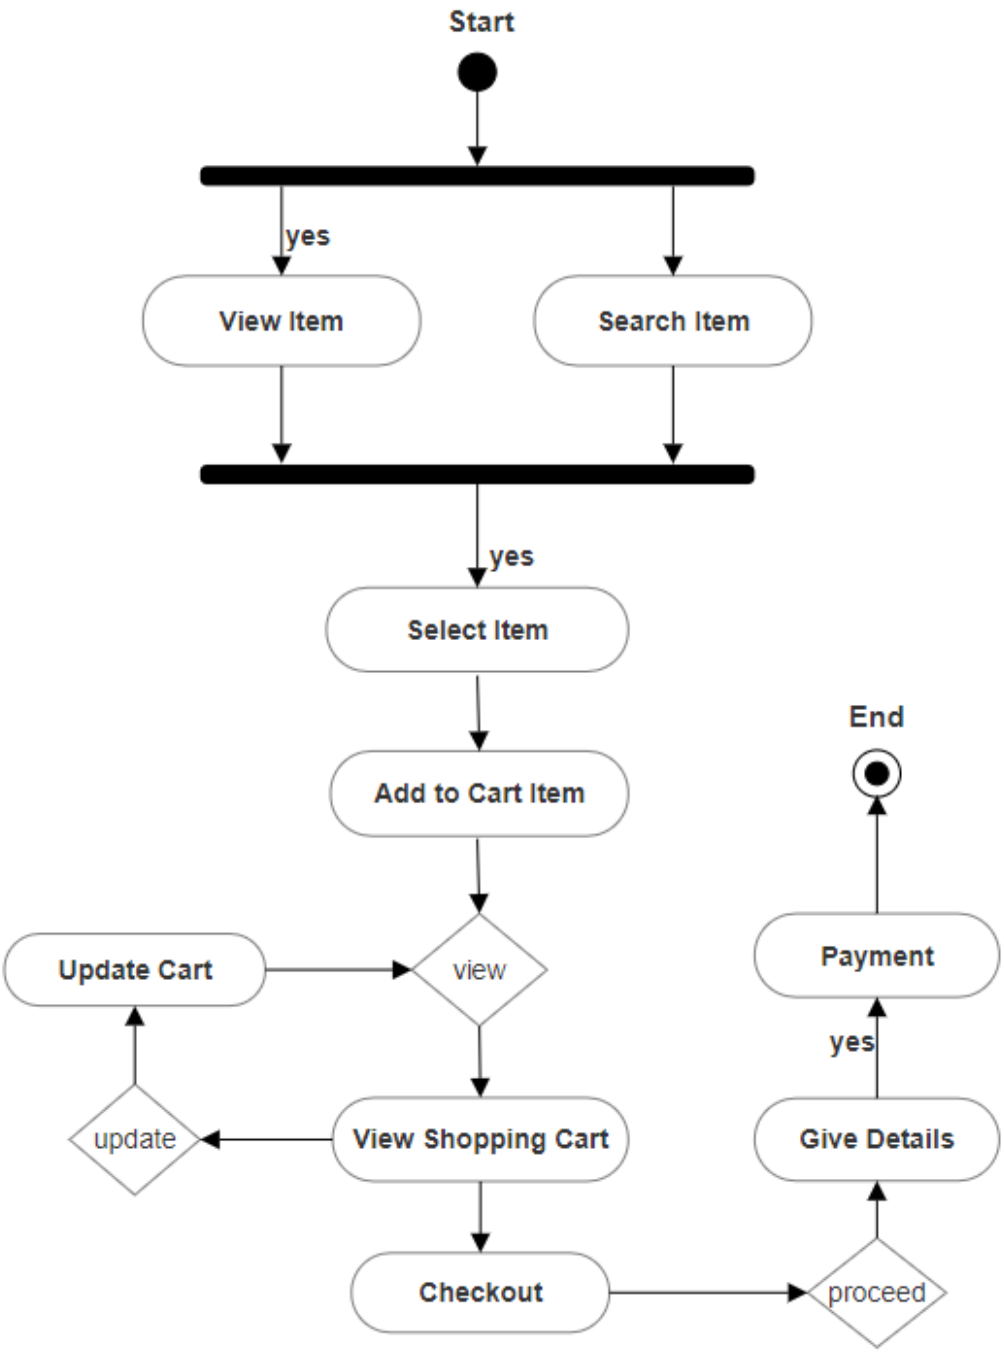
PROJECT DESIGN

Use-Case Diagram (Online Wearable Shopping System):

A use case diagram is used to represent the dynamic behavior of a system. It encapsulates the system's functionality by incorporating use cases, actors, and their relationships. It models the tasks, services, and functions required by a system/subsystem of an application. It depicts the high-level functionality of a system and also tells how the user handles a system.



Activity Chart (Online Wearable Shopping System):



1-Level DFD (Online Wearable Shopping System):

FUTURE WORK

The project entitled Online Wearable Product shopping system was completed successfully. The system has been developed with much care and free of errors and at the same time it is efficient and less time consuming. The purpose of this project was to develop a web application and an android application for purchasing items from a shop. This project helped us in gaining valuable information and practical knowledge on several topics like designing web pages using html, css, and javascript usage of responsive templates, designing of android applications, and management of database using stripe. The entire system is secured. Also the project helped us understanding about the development phases of a project and software development life cycle. We learned how to test different features of a project. This project has given us great satisfaction in having designed an application which can be implemented to any nearby shops or branded shops selling various kinds of products by simple modifications. There is a scope for further development in our project to a great extend. A number of features can be added to this system in future like providing admin more control over products so that each moderator can maintain their own products. Another feature we wished to implement was providing classes for customers so that different offers can be given to each class. System may keep track of history of purchases of each customer and provide suggestions based on their history. These features could have implemented unless the time did not limited us.
